

→ We join forces with you!

Graduates of the Hochschule Bonn-Rhein Sieg (H-BRS) University of Applied Sciences are much sought after experts and business leaders in the Bonn region, nationally and internationally. Through our partnerships and events, many companies find new creative minds at our University. Our University is located in the heart of the Bonn Science Region and is already involved in networking activities with numerous stakeholders.

Just to give you an example: Our students are taught by scientists from the [Fraunhofer Society](#), who also collaborate with us in coordinating research and development tasks, in particular within the jointly run Master's degree programme in Autonomous Systems.

The Department of Social Policy and Social Security Studies organises the [dual Bachelor's degree programme](#) in Social Security Management in collaboration with the German Social Accident Insurance (DGUV).

The [Max Planck Society](#) supports the work of one of our professors at the Max Planck Institute for Radio Astronomy with an endowed professorship.

→ You join forces with us!

You can just as readily join forces with us to sustainably shape the future. Come and join us in developing and expanding the [study programmes of the future](#).

Commit yourself to the next generation of highly qualified experts and business leaders, enrich your company culture, initiate and support [research projects](#).

Events such as the Hochschule Bonn-Rhein-Sieg annual [Company Day](#) provide you with the opportunity to make contact with excellent students and professors alike.

As a [cooperation partner](#) you can, for instance, provide targeted support to young experts through a Germany Scholarship or our University's education fund.

By sponsoring an [endowed professorship](#), your company can offer targeted funding for our programmes in a particular subject area.

→ Excellence:
recognition from many sides!

Family-Friendly University

H-BRS has been a certified "Family-Friendly University" since 2007 and puts this into practice with a variety of different measures.

Top rankings

According to recognised rankings (such as the CHE ranking, conducted in collaboration with the German ZEIT magazine), Hochschule Bonn-Rhein-Sieg study programmes are regularly among the best in each of the subject areas offered.

Successful support for startups

According to the "Gründungsradar" study on academic support for company startups conducted by the German Stifterverband, Hochschule Bonn-Rhein-Sieg is ranked third among Germany's medium-sized universities and is thus considered to be a "role model university".

Satisfied students

H-BRS students are extremely satisfied with their University. In surveys and evaluations students consistently award it very high marks for the quality of support and study conditions.

Our aspiration:
Excellent, innovative, international

Excellent, innovative, international – this is what we aspire to be, this is what fuels our creative drive. [As a catalyst](#) for economic and social development, we seek to help shape the future – in tuition, research and transfer, as well as in close cooperation with partners from academia, business, politics and society at large.

At our three locations in Sankt Augustin, Rheinbach and Hennef as well as at the b-it in Bonn approximately 9,000 students are pursuing results-oriented, practical courses of study, which also ready them for independent professional careers.

At our university, approximately [160 professors](#), supported by 300 research associates, are involved in tuition and research. Moreover, just under 400 lecturers from business, politics and academia contribute their expertise.

[First-class education and in-depth knowledge](#) are the foundations of economic and social development, of a university culture based on sustainability, a sense of values, and a cosmopolitan attitude. This is the way we see the world and this is the way we act.

We are continuously developing our [courses of study](#). At the moment we offer 36 degree programmes, ranging from Business Management to Computer Science, Technical Journalism, Mechanical and Electrical Engineering to Natural Sciences and Social Policy.

Excellent:
Teaching and accepting social responsibility

[We accept our social responsibility](#). Sustainable management and sustainable technologies are a central requirement of our time. Demonstrating vision and responsibility are essential. This is what we prepare our students for.

[Clever minds](#) invest in us and we invest in them. This is why the amount of output generated exceeds the amount of input, this is how great expertise is created, and how conscious thinkers and decision-makers are formed.

[If you have a vision for the future](#), then come and join us! Our work with students and cooperation partners has a cosmopolitan outlook, and fosters interdisciplinary thinking and forward-looking action. This is emphasised by our range of subjects, which also includes Bachelor's and research-oriented Master's degree programmes in interdisciplinary combinations.

The large number of study courses and dual degree programmes highlights our [international outlook](#) and provides our students with international experience while still in their home country.

We create opportunities
for the young generation of scientists. To this end, we have founded a graduate institute which pools the PhD projects of graduates and provides structured support to young researchers.

We strengthen awareness of sustainability.
The aim of the International Centre for Sustainable Development is to advance sustainable development and to integrate it into academic education, research and the university's science transfer projects.

We support startups.
Accepting social responsibility also involves supporting people who aim to start their own company. With our BusinessCampus and an endowment professorship for entrepreneurship, we promote a culture of self-employment as the basis for innovation and enterprise.

We view gender equality as a great opportunity.
We already employ a large number of female professors and motivate young women to take part in engineering programmes. We offer special PhD scholarships for female researchers.

We are family friendly.
We support employees and students with children, for instance, by providing childcare facilities, study rooms for parents with children and the HELP contact point.

Innovative:
Applied research

The most important issues of the future are also key areas of interest for our university: energy, computing, climate, communication, security and mobility. Our research projects are also aimed at ensuring that science has innovative and sustainable foundations.

Our main areas of research are:

- Autonomous systems and robotics
- Energy efficiency and resource conservation
- Security research
- Visual computing

Additional selected research areas include:

- Bio-engineering
- Controlling, innovation and information management
- Public health
- Sensor technology, measuring, control and feedback control systems
- Stem cell research

International:
Into the world – from the world

In view of the changing requirements of the domestic and global job markets, we foster [study periods abroad](#).

[Foreign-language training](#) is compulsory in each study programme. Our [Language Centre](#) currently offers a range of 15 courses.

We cooperate with approximately 80 universities in around 40 countries. The [International Office](#) supports students with any issues related to studying abroad. In collaboration with the [International Welcome Centre](#) it looks after international students and fosters the international exchange of researchers.

Our [international study programmes](#), such as the Master's degree programmes in Analysis and Design of Social Protection Systems, Autonomous Systems, Biomedical Sciences, CSR & NGO Management as well as International Media Studies, which are unique in Germany, provide our students with important international skills.

[Emerging and developing countries](#) are among the focal areas of our internationalisation strategy. Examples include our partnerships with different universities in sub-Saharan Africa (Ghana, Namibia, and Kenya) as well as in China.
